

Open Data for Development Camp

Thursday 12 and Friday 13 May, 2011
Royal Tropical Institute (KIT)
Amsterdam, The Netherlands

Looking for innovative ways to involve and collaborate with people worldwide? Come and explore the potential of open data and its implications for international cooperation!

The Open Data for Development Camp brings together a diverse crowd of development aid workers, policy-makers, researchers, journalists, IT staff, software developers and service providers:

* **A round-table for decision-makers:** introducing key concepts, threats and opportunities, discussing conditions and policies to introduce open data in an organisation, and particularly how does open data contribute to more effective international cooperation?

* **Clinics and workshops for practitioners:** clarifying the basics of open data, presenting best practices and lessons learned, identifying how open data increases transparency and improves international collaboration, and learning about data-driven journalism and communication.

* **Hack days and code sprints for developers:** dealing with repositories and registries, supporting standards and APIs, publishing and reusing data sets, linking open data, and developing tools, apps and mash-ups

Buy your ticket on openforchange.info/oddc
(tickets € 75,- / free developer tickets available)

#openforchange, #oddc

The Open Data for Development Camp is organized by Open for Change under the responsibility of Partos and in cooperation with and financed by the Netherlands Ministry of Foreign Affairs, with co-financing of KIT, TexttoChange, Hivos, Oxfam Novib. It is part of the shared ambition of Partos and the Ministry of Foreign Affairs to report about results of Dutch international development activities in a transparent way, on the basis of open data. ODDC takes place at and is developed in cooperation with the Royal Tropical Institute.
